

What do I want from a job?

SCIENCE

I want to investigate!

What's that? Why did that happen? We all want answers to things. Like, why do we recycle paper or how does a light bulb work?

Science describes the world around you and the effect on your everyday life. Subjects include biology, chemistry and physics.

How science is used in a job

If you work for a chemist, you can help customers who are ill. Or police officers use finger prints as evidence to solve a crime.

Check out what **careers** you may like, but remember they are only ideas!

doctor	ambulance person
forensic scientist	beauty therapist
environmental health officer	biochemist
laboratory technician	electrician
biochemist	production engineer
